1. Executive Summary

Streamix is a cloud-native video streaming platform delivering cinema-quality on-demand movies, TV series, live sports, and documentary content to global subscribers. Built on a modern three-service architecture — Next.js 15 frontend, .NET Core 8 API, and a dedicated Go streaming engine — the platform is engineered for speed, reliability, and cost-efficient scalability.

- Adaptive multi-bitrate HLS streaming (360p → 4K) with per-segment token authentication.
- Four subscription tiers (Free → Premium) supporting both SVOD and AVOD revenue streams.
- Configurable ad system: pre-roll video ads and mid-roll banner overlays managed entirely from backend configuration — no frontend redeployment needed to update ad campaigns.
- Live streaming for sports, events, and TV channels with low-latency HLS delivery.
- PostgreSQL full-text + fuzzy search (pg_trgm) across the entire content catalogue.
- Multi-profile household management with independent watch history and PIN protection.
- All services containerised; ready for Docker Compose (dev) or Kubernetes (production).

2. Company & Vision

Mission Statement

To make premium entertainment accessible on every screen — delivering fast, reliable, beautifully presented video to subscribers regardless of device, bandwidth, or geography.

Core Values

- Quality — every stream is adaptive; buffering is a failure state.
- Accessibility — content available across all devices and connection speeds.
- Personalization — intelligent recommendations driven by real watch history.
- Transparency — clear pricing, no hidden fees, no dark patterns.
- Privacy — user data is never sold to third parties.

Long-Term Vision

Within five years, Streamix aims to become the leading independent streaming platform in its target markets — expanding from web-only to native iOS/Android apps, smart TV SDKs, and adding original content production as a differentiator.

3. Market Opportunity

Global Streaming Market

The global video streaming market was valued at USD 544 billion in 2023 and is forecast to grow at a CAGR of 21.5% through 2030, driven by rising internet penetration, proliferation of connected devices, and the ongoing shift from traditional broadcast to on-demand and live streaming.

Segment	2023 Value	2028 Forecast	CAGR
SVOD (Subscription)	\$100B	\$190B	13.7%
AVOD (Ad-supported)	\$50B	\$130B	21.1%
Live Streaming	\$70B	\$185B	21.5%
Total OTT	\$220B	\$505B	18.1%

Source: Industry estimates, 2024.

Addressable Market

- Total Addressable Market (TAM): USD 220B — global OTT video (2023).
- Serviceable Addressable Market (SAM): USD 42B — English & MENA-language SVOD/AVOD.
- Serviceable Obtainable Market (SOM): USD 210M — achievable in 36 months at 0.5% SAM share.

Key Tailwinds

- 5.4 billion internet users globally, growing ~150M per year.
- Smart TV penetration exceeds 60% of households in primary target markets.
- Mobile data costs falling ~15% annually in emerging markets.
- Cable TV household share has dropped from 83% (2014) to 51% (2024) — cord-cutting accelerating.
- AVOD growth outpacing SVOD: ad-supported tiers now represent 40%+ of new streaming sign-ups.

4. Product Overview

Streamix delivers content through a web application and API-first platform designed for rapid extension to native mobile and TV applications. The product is built around three pillars: discovery, playback quality, and personalization.

Core Feature Set

Browse & Discover	Curated rows per genre, trending, new releases, and editor picks. Real-time fuzzy search with pg_trgm similarity and PostgreSQL tsvector full-text indexing.
Adaptive Streaming	HLS multi-bitrate playback (360p / 720p / 1080p / 4K). Player auto-selects quality based on bandwidth; manual override available via quality selector.
Live Streaming	Live sports, events, and TV channels with low-latency HLS. Live Now / Upcoming / TV Channels pages. Animated live badge, real-time viewer count, event schedule.
Ad-Supported Free Tier	Free tier users see a pre-roll video ad before content and mid-roll banner overlays every 15 minutes. All ad parameters (video URL, skip delay, interval, messaging) are managed centrally from backend configuration — zero redeployment required to change campaigns.
Multi-Profile	Up to 5 profiles per account with independent watch history, recommendations, and optional PIN protection. 'Who's Watching' selector screen.
Watch Progress	Resume exactly where you left off across any device. Continue Watching row auto-populated. Progress marked complete at ≥90% of duration.
Watchlist	Add/remove titles with optimistic UI. Accessible from any profile with per-profile isolation.
Subtitles & CC	WebVTT subtitle tracks selectable per-play, with auto-conversion from SRT on upload.
Search	Instant fuzzy search with pg_trgm + tsvector. Filter by content type, genre, and release year.
Subscription Mgmt	Self-service tier upgrades/downgrades, billing history, and cancellation through the account page.
Admin Dashboard	Content upload via presigned MinIO URLs, transcode status monitoring, channel and live event management.

5. Content & Live Streaming Strategy

VOD Content

- Movies, TV series, documentaries, and short films.
- Multi-season series with per-episode progress tracking.
- Every title encoded at 360p / 720p / 1080p by default; 4K for Premium tier.
- Subtitle support in multiple languages per title.

Live Streaming

- Live sports events (match-by-match rights acquisition model in Phase 1).
- Live TV channels — 24/7 streams managed via the Channel entity.
- Pay-per-view premium events: boxing, concerts, e-sports finals.
- Low-latency HLS delivery via the Go streaming service (liveSyncDurationCount: 3).
- Upcoming events schedule with countdown and reminder system.

Content Acquisition Phases

Phase	Content Focus	Volume Target
Launch (Month 1–3)	Public domain films, indie content, licensed short-form	200+ titles
Growth (Month 4–12)	Regional movie studio deals, sports event PPV rights	1,000+ titles
Scale (Year 2+)	Major studio licensing, original co-productions, live sports	5,000+ titles

6. Target Audience

Segment	Age	Key Behaviour	Primary Device	Best Tier
Young Adults	18–34	Heavy binge-watchers; mobile-first; price-sensitive	Smartphone / Laptop	Free → Basic
Families	28–45	Multi-profile; value Kids Mode; weekend viewing	Smart TV	Standard
Sports Fans	22–50	Live-event driven; high churn if no live rights	Smart TV / Mobile	Standard → Premium
Cinephiles	25–55	Quality over quantity; independent and arthouse content	Laptop / Tablet	Premium
Casual Viewers	18–65	Occasional watching; cost-averse; accept ads	Any	Free (AVOD)

Geographic Roll-out

- Phase 1 (Year 1): English-language markets — US, UK, Canada, Australia.
- Phase 2 (Year 2): MENA Arabic-language markets — UAE, Saudi Arabia, Egypt.
- Phase 3 (Year 3): Localisation for South and Southeast Asia.

7. Subscription & Revenue Model

Tier Structure

Tier	Price/Month	Concurrent Streams	Max Quality	Ads	Downloads	Live
Free	USD 0	1	720p	Pre-roll + Mid-roll	No	Limited
Basic	USD 7.99	1	1080p	None	No	Yes
Standard	USD 13.99	2	1080p	None	2 titles	Yes
Premium	USD 19.99	4	4K HDR	None	Unlimited	Yes + PPV

Revenue Streams

- SVOD — Recurring monthly subscription fees (Basic / Standard / Premium tiers).
- AVOD — Pre-roll video and mid-roll banner advertising revenue from Free tier users.
- Pay-Per-View (PPV) — Premium live events sold as one-time purchases (boxing, concerts, e-sports).
- B2B API Licensing — API access for airlines, hotels, corporate wellness, and IPTV operators.

Unit Economics (Target, Year 2)

ARPU (blended)	USD 11.40 / month
Customer Acquisition Cost	USD 8.50
LTV (24-month avg.)	USD 274
LTV / CAC Ratio	32× (industry benchmark: >3×)
Gross Margin (streaming)	~72%
Monthly Churn Target	<2.8%
AVOD eCPM Target	USD 4.50 per 1,000 ad impressions

8. Advertising (AVOD) System

The Streamix AVOD system is purpose-built for operational simplicity. All ad parameters are managed through a single backend configuration section — marketing and ad operations teams can update campaigns, swap creative assets, adjust timing, and enable or disable ads entirely without touching frontend code or triggering a deployment.

Ad Formats

Format	Trigger	Skip Policy	Default Duration	Placement
Pre-roll Video Ad	Player mount (before content starts)	Skippable after 5 seconds	15–30 seconds	Full-screen overlay
Mid-roll Banner Ad	Every 15 minutes of playback	Dismissible after 5 seconds	30 seconds (auto-close)	Bottom overlay bar

Operational Control

- Enable / disable all ads instantly via the Enabled flag in appsettings.json.
- Swap pre-roll video creative by updating a single VideoUrl config value — change takes effect within 5 minutes (client cache TTL).
- Adjust mid-roll frequency by changing MidRollIntervalMinutes — affects all active sessions within one cache cycle.
- All ad config is served via GET /api/ads/config with a 5-minute ResponseCache header; the frontend caches it via TanStack Query (staleTime: 5 min).
- Paid users (Basic / Standard / Premium) never receive ad config — the frontend hook is disabled for subscriptionTier > 0.

Ad Revenue Model

- Pre-roll CPM: Charged per 1,000 impressions at session start.
- Mid-roll CPM: Charged per banner display (every 15 min per active viewer).
- Click-through revenue: CPC model on Learn More and upgrade CTA clicks.
- Third-party ad network integration planned for Phase 2 (VAST/VMAP tags).

Conversion opportunity: every ad unit includes an 'Upgrade to remove ads' link pointing to the subscription page — turning ad impressions into potential SVOD conversions.

9. Competitive Landscape

Platform	Strengths	Weaknesses	Our Advantage
Netflix	Massive library, global brand, strong recommendation AI	No free tier; high cost; password-sharing crackdown	Free AVOD tier; live sports; lower price point
Disney+	Franchise IP (Marvel, Star Wars, Pixar); family-friendly	Limited adult content; weak live sports	Broader genre coverage; live events; AVOD tier
Amazon Prime Video	Prime bundle value; strong originals	Complex UI mixing rental and subscription content	Cleaner UX; transparent ad-based free tier
YouTube	Free; massive UGC; global brand recognition	Low professional content quality; heavy ad load	Professional content; controlled ad experience; no UGC noise
Streamix	Adaptive HLS tech; live + VOD; configurable AVOD; lower cost	Smaller library at launch	—

10. Go-to-Market Strategy

Phase 1 — Beta (Month 1–3)	Invite-only. 5,000 beta users. NPS feedback loop. Fix critical UX issues. Seed content library with 200+ licensed titles. Validate AVOD ad metrics.
Phase 2 — Soft Launch (Month 4–6)	Open registration. All tiers live. Free AVOD tier drives top-of-funnel. Target: 50,000 registered users, 8,000 paid subscribers, 42,000 active Free users.
Phase 3 — Growth (Month 7–18)	Performance marketing (Google, Meta, TikTok). Referral program (30-day free Premium). Influencer / creator partnerships. Target: 500,000 registered, 80,000 paid.
Phase 4 — Expansion (Month 19–36)	iOS & Android native apps. MENA market launch. Live sports rights for regional leagues. VAST/VMAP integration for programmatic ad buying.

Customer Acquisition Channels

- SEO / content marketing — streaming guides, genre landing pages, search-optimised title pages.
- Social media advertising — short-form video clips as creatives (TikTok, Instagram Reels, YouTube Shorts).
- Referral program — both referrer and referred receive 1 month free Standard.
- Partnerships — ISP bundle deals; smart TV manufacturer pre-installs.
- AVOD flywheel: Free tier users share content; social sharing drives organic acquisition.

11. Technology & Operations

Frontend	Next.js 15, React 18, TypeScript 5, Tailwind CSS 3, HLS.js, TanStack Query 5, Zustand 4, NextAuth.js 5, Framer Motion
Backend API	.NET Core 8, ASP.NET Core, Clean Architecture (4-project solution), MediatR, FluentValidation, AutoMapper, EF Core 8 + Npgsql
Streaming Service	Go 1.24, Chi v5, FFmpeg (multi-bitrate HLS), MinIO SDK, go-redis, golang-jwt
Database	PostgreSQL 16 with pg_trgm + tsvector full-text search + uuid-ossdp
Cache	Redis 7 — API response cache (10 min TTL), JWT refresh tokens (7 days), ad config (5 min)
Object Storage	MinIO (S3-compatible) — raw video, HLS segments, thumbnails, subtitles
Infrastructure	Docker, Docker Compose v5 (7 services); production target: Kubernetes
CDN (production)	CloudFront / Cloudflare for HLS segment delivery; 5-min cache on ad config
Ad Configuration	Backend appsettings.json 'Ads' section — live control with no frontend deployment

Content Operations

- Admin uploads raw video via presigned MinIO URL — no file size limit.
- Go service transcodes to 360p / 720p / 1080p in parallel; SLA < 25 min for a 90-min movie.
- Subtitles uploaded as SRT; auto-converted to WebVTT by the Go transcoder.
- Post-transcode callback from Go to backend updates asset status to 'ready'.

12. Risk & Mitigation

Risk	Likelihood	Impact	Mitigation
Content licensing exceeds budget	Medium	High	Start public domain + CC; license incrementally as revenue grows.
Infrastructure costs at scale	Medium	Medium	CDN for HLS (cost per GB falls at volume); auto-scaling.
Churn — thin content library	High (Y1)	High	Free AVOD tier retains cost-sensitive users; live sports as stickiness anchor.
Ad revenue lower than projected	Medium	Medium	AVOD is supplementary; SVOD is primary. Adjust ad frequency/format via config.
Competitor price war	Low	Medium	Cost leadership via in-house streaming stack; B2B licensing as hedge.
DRM / piracy of premium content	Medium	Medium	Short-lived signed segment tokens (implemented). Widevine/FairPlay in Phase 2.
Regulatory / geo-blocking	Low	Low	IP-based geo-filtering; legal review per market before launch.
Cybersecurity breach	Low	High	bcrypt passwords; JWT short expiry; Redis refresh token rotation; pen testing.
Ad config exposure (sensitive URLs)	Low	Low	Ad config endpoint is public but read-only; no secrets exposed in response.

13. Financial Projections

Illustrative estimates based on comparable SVOD/AVOD platforms at similar growth stages. AVOD projections assume ad monetisation via direct brand deals in Year 1, programmatic networks from Year 2.

Metric	Year 1	Year 2	Year 3
Registered Users	100,000	500,000	2,000,000
Paid Subscribers	15,000	80,000	350,000
Free (AVOD) Active Users	60,000	300,000	1,200,000
ARPU — Paid (USD/month)	\$9.20	\$11.40	\$12.80
AVOD Revenue / Free User	\$0.80/mo	\$1.10/mo	\$1.40/mo
Monthly SVOD Revenue	\$138K	\$912K	\$4.48M
Monthly AVOD Revenue	\$48K	\$330K	\$1.68M
Annual Total Revenue	\$2.2M	\$14.9M	\$73.9M
Content Licensing Cost	\$0.7M	\$4.1M	\$18.0M
Infrastructure Cost	\$0.3M	\$1.3M	\$4.5M
Gross Profit	\$1.2M	\$9.5M	\$51.4M
Gross Margin	55%	64%	70%

All figures USD. Projections exclude capex. AVOD row assumes Free tier MAU × eCPM.

14. Roadmap

Quarter	Milestone
Q1 2025	MVP web launch: VOD, 4 subscription tiers, AVOD ad system, 200 titles
Q2 2025	Live streaming: sports events, TV channels, PPV events
Q3 2025	iOS & Android native apps (React Native)
Q4 2025	Widevine / FairPlay DRM; offline downloads for Standard/Premium
Q1 2026	VAST/VMAP programmatic ad network integration for AVOD scale
Q2 2026	MENA launch: Arabic UI, RTL layout, regional content
Q3 2026	Smart TV apps (Samsung Tizen, LG webOS)
Q4 2026	ML-powered recommendation engine (collaborative filtering)
2027	Original content production — first 3 exclusive titles; Series A raise

— End of Document —
